

Preamble

The Mock Debate Code, orchestrated by Thenuel Debate and Literary Fronesis (TDELF), is an innovative, structured platform designed to elevate the debate experience beyond mere rhetoric. Its core objective is to foster intellectual maturity in participants by encouraging them to engage in the deliberation of pressing national and international issues, reflecting dignitary values and responsibilities. This program seeks to cultivate a nuanced understanding of complex problems, urging debaters to propose clear and impactful resolutions to the themes at hand.

Rooted in a highly formalized debate format, the Mock Debate immerses participants in roles that mimic respected leaders and dignitaries, compelling them to advocate for their assigned positions with poise and insight. By engaging in this dignitary mock aspect, participants not only represent their assigned dignitaries — whether Heads of State or civil society representatives — but also embody the responsibilities these roles entail, thereby presenting arguments on significant matters in an assumed summit setting.

The structure of the debate is characterized by team compositions of four active speakers, a predefined set of illustrious national and international summits, and exclusively formulated motions that resonate with realistic proposals from the gathered dignitaries. The format allows for intricate interactions through questioning and cross-examinations, promoting an atmosphere of rigor and critical analysis, where spectators can relish in the depth of discourse.

At its core, the Mock Debate Code embraces a philosophy of interdisciplinary learning, ensuring that each participant is not only versed in their responsibilities but also understands the broader implications of the issues at play. Candidates are encouraged to collaborate effectively, embody the values of diplomacy, and develop a keen awareness of global affairs that extend far beyond the confines of the classroom. In this exciting arena, students are transformed into articulate advocates, prepared to tackle the challenging discourse of our times with creativity, respect, and intellectual rigor.

MOCK DEBATE CODE

BY THENUEL DEBATE AND LITERARY FRONESIS (TDELFF)--EMMANUEL OBORE

Objective of the debate program

The core objective of this debate program is to enable debaters look at issues beyond just from a student perspective but from a dignified perspective; deliberating national and international issues of common interest, of formidable gatherings and summits and providing deeper mature insights and conclusive vivid clear-cut **proposals** as long-lasting resolutions for the motions or themes discussed.

This format stirs up intellectual-maturity prowess of debaters because of the weight that pertains dignitary responsibility.

Structure of the debate

Well packaged, most inclusive, most corporate, most modernized, most sobering; the Mock Debate Format here, popularly used in various schools and institutions, - is the ultimate. The debates in the "Mock Debate" format which are organized by Thenuel Debate and Literary Fronesis (TDELFF), abide by these principles;

i) *The dignitary mock aspect*

Here, debaters shall imitate or mock certain people they are representing, assuming their dignified responsibility and stances, deliberating on pertinent issues of great significance notably in assumed popular National and International Leadership Summits. For example debaters are to imitate say, Heads of State across Africa in an assumed African Union Summit, discussing say, the aspect of Human Rights in Africa. They will behave like Museveni of Uganda, Emmanuel Mnagagwa of Zimbabwe, Deborah Malac- (US Ambassador to Uganda), Antonio Guterres (Sec. General of UN) etcetera in the presumed African Union Summit having say Serena Conference Hall as its presumed venue, yet deliberately and actively debating on the pertinent theme or motion.

i) *Team composition*

- ❖ Four teams participate in a debate match.
- ❖ Each team should have four active debate-speakers in a debate match.

ii) *Set up*

The Set-up is of prominent National, Regional and International Leadership Summits that usually involve heads of states of various countries, Civil Society Organisations Activists, pertinent local leaders, political dignitaries and pertinent formidable international envoys and diplomats i.e;

- ❖ **REGIONAL AND INTERNATIONAL SUMMITS** may include; African Union Summit, European Union Summit, United Nations Summits, Commonwealth Heads Of Government Meeting, East African Community Summit among others.
- ❖ **NATIONAL SUMMITS** may include; Independence Day Celebrations, National Prayer Breakfast, International Day Celebrations e.g. World AIDS day, UN Human Rights Day, UN Day in support of Victims of Torture, International Labour Day, International Women's Day among others.

For regional and international summits, the themes or motions of discussion are drawn from issues of common interest and significance among states whereas for national summits, themes of discussion are drawn from issues of national common interest and significance within a state or a specific locality within a state. Therefore, debaters are to exhibit dignified and honorary quality and unequalled leadership experience during this debate.

iii) *Phrasing of debate motions*

Concerning the phrasing of this, themes or motions are phrased in reference to the name or participant members of the summit. For instance; **AFRICAN UNION MEMBER STATES SHOULD ILLEGALIZE ABORTION ACROSS AFRICA** if the summit is of African Union, **EAST AFRICAN COMMUNITY MEMBER STATES SHOULD FORM ONE CURRENCY** if the summit is of East African Community, **COMMONWEALTH HEADS OF STATE SHOULD ABOLISH THE DEATH PENALTY** if it is of Commonwealth Heads of Government Meeting, **UGANDA'S INTERVENTION IN FOREIGN CRISES IS JUSTIFIABLE** if it is of any of National Summits pertaining Uganda e.g. Independence Day e.t.c

iv) *The Cards and their significance*

The selection of the allotment of cards shall be conducted in a way announced an hour earlier to the coaches and debaters of the four teams by the Chief Judge. The cards shall also indicate the dignitaries the team members are representing depending on the card the Chief Judge allocates each team.

Each team consists of four to six debaters, four of whom actively participate in the debate. Debaters of a team can freely change within their team during a competition, but not during a debate match. Literally, from the four teams, two teams are to propose and the other two teams will oppose.

v) *Windows*

Windows are the category of members that are assigned to each debate team.

There are two types of windows; Closed window and Open window.

a) **Closed window**

This is the kind of card allotment of debaters where we have strictly two males and two females in each team, with strictly specified dignitaries as shown below.

Of International and Regional Summits

CARD	SIDE	DIGNITARIES
Alpha	Proposers I	Speaker of Parliament, Minister ^{A1} , Premier, President ^{A1}
Miu	Opposers I	Leader of Opposition, CSO Activist ^{M1} , President ^{M1} , President ^{M2}
Beta	Proposers II	Minister ^{B1} , IGG, President ^{B1} , President ^{B2(Of Host Country)}
Omega	Opposers II	CSO Activist ^{O1} , CSO Activist ^{O2} , President ^{O1} , International Envoy

Of National Summits

CARD	SIDE	DIGNITARIES
Alpha	Proposers I	Minister ^{A1} , Minister ^{A2} , Speaker of Parliament, Premier
Miu	Opposers I	CSO Activist ^{M1} , CSO Activist ^{M2} , CSO Activist ^{M3} , Leader of Opposition
Beta	Proposers II	Minister ^{B1} , IGG, Government Commissioner, President (Of Host Country)
Omega	Opposers II	CSO Activist ^{O1} , CSO Activist ^{O2} , Chief Justice, International Envoy

Note:

Minister ^{A1} means the Minister Number 1 of Card Alpha and so respectively, are the labels of the debaters in the Cards and the Sides in the tables above e.g. **President** ^{B1} as portrayed by Card-Beta, Side Proposer II, in the Table Of International and Regional Summits above, represents President Number 1 of Card Beta. etcetera.

CSO Activist means **Civil Society Organisation** Activist which include Persons exclusive from the State business, whose organisations support and advocate for the socio-economic, physical and spiritual welfare of either national or international populace i.e. Non Government Organisations, Community Based Organisations, Faith Based Organisations, Cultural Institutions, Charity Organisations etcetera.

IGG is an acronym for **Inspector General of Government** who is charged with a responsibility, among others of reducing and eliminating corruption from Public Offices, by the Statutory Constitution.

Ministers shall be given distinctions by the Chief Judge. For-instance each Minister shall be allotted a position of duty i.e Minister of; Health, Foreign Affairs, Energy and Minerals, Education and Sports, Finance, Lands etcetera pertinent and relevant to the context of the motion of debate, the set-up of debate and the status quo. The Chief Judge should have an updated list of names and positions of real dignitaries to allot the mock debaters.

He/she, on another serious note, should allot names and positions in respect to gender consonance. For example, if the Minister of Health, from a reality perspective is Hon. Jane Achieng-a female, the Mock debater hereof should be a female. Also, if for example the President of Kenya is His Excellency Uhuru Kenyatta- a male, the mock debater hereof should be a male. The debaters and coaches have a right to complain to the Chief Judge for quick redress if gender consonance principle is abrogated.

The Chief Judge will allot debate teams cards fairly in such a way that each team shall have an equal allotment of every card in the subsequent matches. This allotment will end in the preliminary matches. From quarter finals level up to finals, cards shall be tossed and teams will pick at random, and whichever card a team picks, is how the team should debate. The cards, as shown in the table above, shall also indicate the dignitaries the team members are representing.

Questioning

This refers to basically two aspects; audience asking and cross examination.

Audience asking

This refers to the one question that a person from the audience (audience asker) asks a debate-speaker immediately after his or her speech. The moderator (s) of the summit is the one the jurisdiction lies upon to choose who asksthe questions from the audience. Coaches are not allowed to ask questions.

Cross examination

After audience asking, comes cross examination. The cross examination is vice versa, in that the speaker cross examined will also cross examine the very one who cross examined him or her.

International summits

CARD	SIDE	DIGNITARIES			
Alpha	Proposers I	Speaker of Parliament ↓	Minister ^{A1} ↓	Premier ↓	President ^{A1} ↓

Speaking Order

Of International and Regional Summits

1. Speaker of Parliament

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Leader of Opposition cross examines Speaker of Parliament

2. Leader of Opposition

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Speaker of Parliament Cross examines Leader of Opposition

3. Minister^{B1}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
CSO Activist ^{O1} cross examines Minister ^{B1}

4. CSO Activist^{O1}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Minister ^{B1} cross examines CSO Activist ^{O1}

5. Minister^{A1}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
CSO Activist ^{M1} cross examines Minister^{A1}

6. CSO Activist ^{M1}

- 1 Question from the audience and the response thereof (Applicable to quarterfinals up to grand finale matches only)
Minister ^{A1} cross examines CSO Activist ^{M1}

7. IGG

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
CSO Activist ^{O2} cross examines IGG

8. CSO Activist ^{O2}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
IGG cross examines CSO Activist ^{O2}

7 MINUTES FIRST HALF BREAK TIME

9. Premier

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
President ^{M1} cross examines Premier

10. President ^{M1}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Premier cross examines President ^{M1}

11. President ^{B1}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
President ^{O1} cross examines President ^{B1}

12. President ^{O1}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
President ^{B1} cross examines President ^{O1}

13. President ^{A1}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
President ^{M2} cross examines President ^{A1}

14. President^{M2}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
President ^{A1} cross examines President ^{M2}

15. President^{B2} (President of the Host Country)

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
International Envoy cross examines President^{B2} (President of the Host Country)

16. International Envoy

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
President^{B2} (President of the Host Country) cross examines International Envoy

Of National Summits

1. Minister ^{A1}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
CSO activist ^{M1} cross examines Minister ^{A1}

2. CSO Activist ^{M1}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Minister ^{A1} Cross examines CSO Activist ^{M1}

3. Minister ^{B1}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
CSO Activist ^{O1} cross examines Minister ^{B1}

4. CSO Activist ^{O1}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Minister ^{B1} cross examines CSO Activist ^{O1}

5. Minister ^{A2}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
CSO Activist ^{M2} cross examines Minister ^{A2}

6. CSO Activist ^{M2}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Minister ^{A2} cross examines CSO Activist ^{M2}

7. IGG

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
CSO Activist ^{O2} cross examines IGG

8. CSO Activist ^{O2}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
IGG cross examines CSO Activist ^{O2}

7 MINUTES FIRST HALF BREAK TIME

9. Speaker of Parliament

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grand finale matches only)
CSO Activist ^{M3} cross examines Speaker of Parliament

10. CSO Activist ^{M3}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grand finale matches only)
Speaker of Parliament cross examines CSO Activist ^{M3}

11. Government Commissioner

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grand finale matches only)
Chief Justice cross examines Government Commissioner

12. Chief Justice

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Government Commissioner cross examines Chief Justice

13. Premier

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Leader of Opposition cross examines Premier

14. Leader of Opposition

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Premier cross examines Leader of Opposition

15. President (Country President)

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
International Envoy cross examines President ^{Country President}

16. International Envoy

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
President ^{Country President} cross examines International Envoy.

b) Open window

This is the kind of card allotment of debaters where we have no restrictions on the male and female genders of the four debate-speakers. Nevertheless, the hierarchy of the dignitaries from the least to the greatest, in ascending order is much more strictly followed during speeches.

13. Speaker of Parliament or Deputy Speaker of Parliament or Minister ^{A4}

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Leader of Opposition or Shadow Minister cross examines Speaker of Parliament or Deputy Speaker of Parliament or Minister ^{A4}

14. Leader of Opposition or Shadow Minister

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
Speaker of Parliament or Deputy Speaker of Parliament or Minister ^{A4} cross examines Leader of Opposition or Shadow Minister

15. President (Country President) or Vice President or Minister ^{B4} or Diplomat

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
International Envoy cross examines President ^{Country President} or Vice President or Minister ^{B4} or Diplomat

16. International Envoy

- 1 Question from the audience and the response thereof (Applicable to quarter finals up to grandfinale matches only)
President ^{Country President} or Vice President or Minister ^{B4} or Diplomat cross examines International Envoy.

Time allocation

From the preliminary stages up to Octo-finals, in a debate match, of the debate tournament;

ACTIVITY	TIME	FREQUENCY	TOTAL TIME
Procession of debate-speakers into the House	5 Minutes	1	5
Anthems	3 Minutes	1	3
Prayer and welcome remarks	4 Minutes	1	4
Debate speaker Speech	5 Minutes	16	1 hr: 20 minutes
Cross examination by the specific assigned debate speaker.	1 Minute	16	16 minutes
In between moderation time by Moderator	15 Seconds	16	4 minutes
Break Time	4 Minutes	1	4 minutes
Extra Time	15 Seconds	16	4 minutes
GRAND TOTAL TIME			2HRS: 00MINS: 00S

From quarter finals up to finals, in a debate match, of the debate tournament

ACTIVITY	TIME	FREQUENCY	TOTAL TIME
Procession of debate-speakers into the House	5 Minutes	1	5 minutes
Anthems	5 Minutes	1	5 minutes
Prayer and welcome remarks	5Minutes	1	5 minutes
Debate speaker Speech	6 Minutes	16	1 hr. 36 minutes
Cross examination by the specific assigned debate speaker.	2 Minutes	16	32 minutes
Audience Asker Session	30 Seconds	16	8 minutes
In between moderation time by Moderator	15 Seconds	16	4 minutes
Break Time	7 Minutes	1	7 minutes
Extra Time	30 Seconds	16	8 minutes.
GRAND TOTAL TIME			2HRS: 50MINS: 00S

Protocol of the debate

This refers to the procedure for how the debate sessions should be performed.

- Introduction and ushering

The moderator of the Summit introduces the nature of summit and himself/ herself. The moderator shall maintain his real names but shall title himself as an extinguished International Journalist from Prominent National and International Media Houses such as a Journalist from Russian Times, BBC, CNN, NTV, Aljazeera etc. He later ushers dignitaries (debaters) into the House of the summit (debate) in a dignified manner identifying them with their mock titles and names.

- Procession

The moderator should also captivate and engage the audience by telling them to rise up and applaud (by clapping, cheering) the dignitaries as they walk in- the sign of international or national charisma and decorum. The noiseless instrumental sound effects shall be played as the debaters are ushered in. They will be guided swiftly to their specific seats by aides.

- Anthems

One or two anthems are sung or played-the National Anthem of the Host Country and of the specific regional or international coalition as per the summit i.e Uganda Anthem, and East African Anthem, or African Union Anthem or United Nations Anthem, Commonwealth Anthem e.t.c

- Prayer and opening remarks

The moderator will to open up with the word of Prayer before give opening remarks concerning the issues to be discussed.

- Debate-speeches I

The moderator will invite each debater/ dignitary to the podium one after another in accordance to the speaking order. Audience Asking and Cross Examination subsequently happen respectively under the moderation of the Moderator, after each debater's speech. Note that the aides shall always stand beside each dignitary during the speech. They will always assist the dignitary speaking with whatever he or she tells him. They will only stand aside during cross examination.

- First Half Break Time

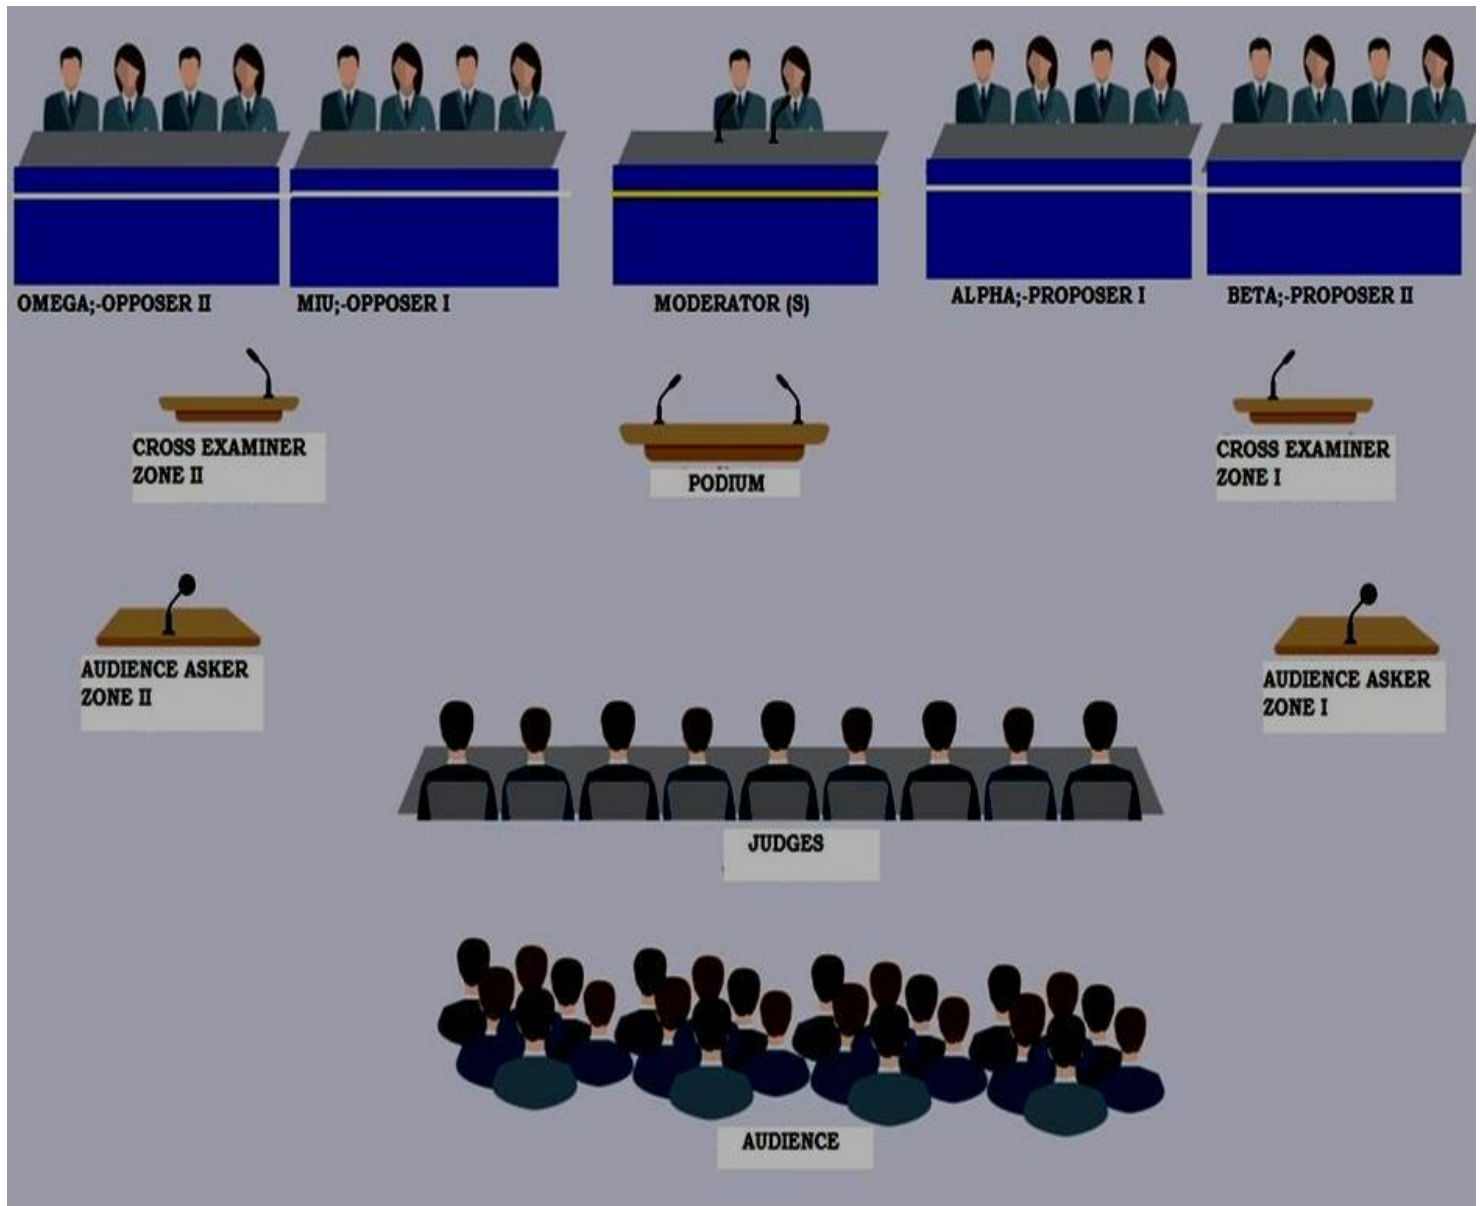

After two debate-speakers from each team have deliberated, the debate-teams shall break; for 7 minutes, if it is from Quarter Finals to Finals matches, and for 4 minutes, if it is from preliminary to Octo Finals matches. During this First Half Break Time, the debaters, coaches, moderators, judges and audience may ease themselves to the calls of nature because debaters, moderators and judges are strictly not allowed to excuse themselves to the washrooms during the debate.

Much importantly, this is the moment where debate team members with assistance of their coaches are to cognitively build up in preparation for the Second Half of the debate. Judges or any other technical may give constructive guidance to the debaters only after the debate match **BUT NOT** during the debate or during the First Half Break Time.

- Debate-speeches II

By the end of the First Half Break Time, the second half debate deliberation (Debate speeches II) should have started and therefore, the debaters, judges, moderators, coaches and the general audience are strictly obliged to be in the debate house on time.

Sitting arrangement

All participants should abide by the Mock Debate Code structure of Discipline knowing that the achievement of its core objective thereof is to the socio-economic betterment of all the participants and ultimately the extra-ordinary cognitive boost of the debaters in specific.

ROLES OF DEBATE-SPEAKERS

Basic roles for all debaters

- ❖ Firstly, each debate speaker should speak in full capacity of the dignitary he or she is mocking exhibiting full dignified maturity, authority and intellect.
- ❖ Further-more, he or she should relate the issues of discussion with his/her professional role as that dignitary, the set-up of the debate, the history, the status quo and the future-projected status of the very issues
- ❖ Affirmative/Proposer debate-speakers here have a great burden of proof; to justify beyond reasonable doubt why they concur and support the motion of the Summit discussed.
- ❖ Negative/Opposer debate-speakers, here have a great burden of refutation; to justify beyond reasonable doubt why they negate and do not support the motion of the Summit discussed.
- ❖ Debate speakers in a team should generate arguments or points together.

Note: Team debaters should present atleast sixteen arguments as a team, and split arguments to be presented, equally among the four debaters of the team.

- ❖ In conclusion of the debate-speech, each debate-speaker, should provide a unique vivid **Proposal**. On emphasis, proposals **SHOULD NOT** be the same but may be similar and the more unique the proposal, the better, since it portrays the distinctive philosophical prowess of a debater which weighs heavily in terms of marks. This Proposal should entail; the implementer, how it is to be implemented, and the time frame it shall, in support of the motion, get successfully effected or achieved. S/he should convince the House about the substantial strength of the benefits of his or her proposal and why the members of the summit should adopt it.
- ❖ Each debate-speaker immediately after a speech, shall respond to a question from the audience by the Audience Asker.
- ❖ Each debate-speaker shall cross-examine and shall be cross-examined.
- ❖ Debate-speakers should observe formal protocol in greeting, addressing and responding to each other knowing that this is a discussion pertaining honourable ladies and gentlemen. This is strategy- one of the bases on adjudication.

Roles of the first debate-speakers

a) Definition of key terms in the motion

- ❖ Each first debate-speaker of a debate team (Alpha, Beta, Miu, Omega) has to define the key terms in the resolution or motion as per the context.
- ❖ Much as definition of key terms in the motion is fundamental, after the first speaker has done it, the subsequent first speakers may not redefine if they are in agreement with the definitions thereof. Nevertheless, if they are dissatisfied, giving reasons as to why they are dissatisfied, they may redefine. If the redefinition is more proper than the previous definitions of other speakers, it is advantageous in terms of marks attainment and the detriment thereof to the previous speakers whose definitions are challenged.

b) Rebuttal, building on, and construction of arguments

- ❖ The first debate-speaker of Team Alpha (Proposer I): He or she is the first debate-speaker and so, there is no rebuttal and building on. The sole role here is construction of arguments.
- ❖ The first debate-speaker of Team Beta: (Opposer I): He or she is the second debate-speaker and so, there is no earlier arguments presented by a member of his team or side to build on. He/she rebuts the first debate-speaker of Team Alpha (Proposer I) and finally does the construction of his or her arguments. It is important to note that Rebuttal and Building on, should entail, also the analysis of the standing information of questioning and cross-examination of the earlier speakers.
- ❖ The first debate-speaker of Team Miu (Proposer II): He or she is the third debate-speaker and so there are earlier arguments presented by a member of his/her side of proposers- the first debate-speaker of Team Alpha, whose arguments he/she is to build on more after the rebuttal of arguments of the first debate-speaker of Team Beta (Opposer I). It is important to note that Rebuttal and Building on, should entail, also the analysis of the standing information of questioning and cross-examination of the earlier speakers. He/she finally does the construction of his or her arguments.
- ❖ The first debate-speaker of Team Omega (Opposer II): He/she is the fourth debate-speaker and so there are earlier arguments presented by a member of his or her side of Opposers-the first debate-speaker of Team Beta, whose arguments he/she is to build on more after the rebuttal of arguments of the first debate speakers of Team Alpha and Team Miu of Proposer I and Proposer II respectively. It is important to note that Rebuttal and Building on, should entail, also the analysis of the standing information of questioning and cross-examination of the earlier speakers. He/she finally does the construction of his or her arguments.

Roles of the rest of the subsequent debate-speakers

a) Rebuttal, building on, and construction of arguments

Each of the subsequent speakers, firstly, shall rebut the cases of the opposite debaters; rebutting the cases does not necessarily mean refuting every point but some critical points and the case in general.

They then build more on the points of the earlier speakers of their team and side by supporting the arguments or points thereof including those, which have been challenged or refuted by refuting the refutation with examples, evidence, analogies, theses and such. It is important to note that Rebuttal and Building on, should entail, also the analysis of the standing information of questioning and cross-examination of the earlier speakers.

He/she finally does the construction of his or her arguments.

BASIS OF JUDGMENT

1. STRATEGY (WEIGHTS 30%)

Strategy, in its essence, is not merely a plan; it is a meticulously crafted blueprint brimming with multifaceted tactics designed to secure victory over adversaries in the arena of debate.

Consider, for instance, the story of a captivating woman who endeavors to capture the heart of a remarkably attractive, affluent, and virtuous man. She knows that winning his affection is not merely a matter of chance; it is an art that demands cunning and deliberate preparation. With clarity of purpose, she embarks on her strategic journey. First, she indulges in a refreshing bath, washes away the remnants of the day, and revitalizes her spirit. Next, she adorns herself with her finest attire, each stitch meticulously selected to reflect her grace and charm, as she carefully applies makeup, transforming her visage into an enchanting portrait of beauty.

But her strategy extends beyond mere aesthetics. With unwavering resolve, she practices her engaging conversation, honing her words to create an irresistible melody that captivates the soul. Her graceful strides are rehearsed, each step a delicate dance that draws attention as she imagines herself gracefully walking the runway of life. This cultivation of confidence becomes her armor, as she stands poised to seize her moment.

Timing is paramount; she keenly observes the arrival of her beloved, watching intently as he parks his luxurious car, contemplating his next move. With her reflection in the mirror imparting a sense of assurance, she steps forth fearlessly. While other women, equally eager yet hesitant, flit around the handsome stranger, she strides decisively towards him, embodying elegance in her every motion, her catwalk a testament to her self-assurance.

With a radiant smile that lights up the atmosphere and a voice as sweet as honey, she initiates their dialogue, breaking the silence of anticipation. Their conversation unfolds seamlessly, each word crafting an invisible thread that binds them closer together. Her charm enchants him, igniting a passion that blossoms into an undeniable affection. As their relationship flourishes and culminates in a sacred union, she continues to employ her strategic acumen, ensuring that the depth of their love remains unwavering, rendering any temptation for distraction obsolete as her beloved finds joy solely in her embrace. Such is the brilliance of her strategy!

Now, let us glean a profound lesson from this enchanting narrative, for a debate-speaker must embody the same strategic finesse as this remarkable woman. To prevail over opponents in the fierce arena of discourse, one must approach preparation with the same diligent intent, embracing a holistic framework that encompasses not only the knowledge of one's arguments but also the mastery of delivery, body language, and emotional resonance.

Just as she cultivates her allure, so too must the debate-speaker polish their arguments until they shine with clarity and power, practice their delivery until every phrase flows effortlessly, and mirror the confidence required to engage with their audience. It is through a thoughtful, comprehensive strategy that lasting impressions are made, hearts are swayed, and triumph is achieved. In the delicate dance of debate, let each participant stride forth as a strategist, ready to charm their audience and opponents alike, wielding their rhetoric like the finest art of persuasion. What remains is not just a victory but a legacy of eloquence and intellect that resonates long after the debate has concluded.

Now therefore, in simple terms, Strategy is the use of full-bodied tactics to triumph over debate opponents. Strategy includes;

- a) Preparation
- b) Timing (Timeliness)
- c) Team work
- d) Understanding the debate system

a) Preparation

Do not be deceived; however perspicacious you are, the quality of a debate speech depends much so entirely on how much and how well you have prepared. The shoddier the preparation, the less quality the debate speech will be, and the thorough the preparation the more impeccable the debate speech. There are two types of preparation that pertain an effective debate-speaker; the physical preparation and the intellectual preparation.

❖ Physical-self preparation

Your physical self ought to be neat, hygienic and modestly groomed in advance for this is what everyone in the audience sees before you open your mouth to speak; and more to this you might speak yet say nothing if your mouth has a bad odour. By the way you look, you cast first impression about yourself.

- o Let the clothes be washed and ironed, let your shoes be polished, let the hair be groomed, let the nails be groomed, let the mouth be brushed, let the body be bathed so that the armpits are odorless in advance and so on and so forth in this pursuit of hygiene, modest grooming and neatness!

Be sound and excellent in your physical self at least! It will be ridiculously hard to reconcile your intellectual excellence with your shabby outlook.

- o Sort all the similar outfits that pertain to the probable dignitary you are to imitate during the debate, for you know not which dignitaries exactly you may be allotted during the debates. The theme and the list of the dignitaries to be mocked published prior by the tournament organizers, should be the context of your sorting.

- o More to this, prepare your weapon of attack and defence--the voice. Prepare by preserving your voice from the negative consequences of hoarseness and tiredness.

A seasoned debate-speaker is that one which is thoroughly tuned to this technique of physical-self preparation.

❖ Intellectual-self preparation

A debate team should prepare without ceasing till the end of the debate match. Preparation ought to be done before and during the course of the debate match.

The moment the theme of the tournament or motion of the debate match has been declared; a debate team should gather all facts of the debate theme and the motion.

- o Have intercourse with the general theme and the motion in particular; soak yourself in it. Facts are ideas, concepts, examples, theses that are connected to the theme and motion in particular of the status quo, history, projected status, arguments in support or negation.
- o Gather all probable motions alongside the theme then gather all arguments in support and in negation of the motions, the pros and the cons prior, for you know not the side of the debate the chief judge will allot you.
- o Afterwards arrange those arguments from the greatest to smallest, each of the arguments backed with solid facts. The descending arrangement of arguments is very important; for great things should always be given priority over others. And this should be the same order, these arguments be presented in the actual debate match.
- o More to this; put theory into practice by rehearsing style tactics prior. In your closet or while beholding a mirror or at the scrutinizing watch of your colleagues and teammates rehearse eye contact, gestures, varied voice intonation, confidence and so on so that you are fully fit at the actual platform.
- o Finally, manifest what you profess on the platform by prior rehearsals of practice to become a seasoned debate-speaker.

b) Team work

A debate team ought to be of a concerted intellectual prowess to be able to triumph over their opponents. The word **TEAM** is an acronym for **T**ogether **E**veryone **A**chieves **M**ore and it is simply as plain as that. Teamwork is a rationale whereby the weaker debaters are made strong and the strong debaters are made stronger and ultimately the stronger debater team is made strongest.

❖ Leadership.

For a successful debate team is always that one with a leadership of a captain, so a team ought to have a captain who ought to really lead his team and not to rule them. He ought to always take the presiding role -coordinating his teammates before and during the match effectively.

❖ Contribution of ideas

Arguments and ideas ought to be generated together as a team and all teammates ought to be actively involved in these, prior and during the debate match. Arguments and ideas ought to be thoroughly weighed by they themselves to determine which arguments are substantial and which ones are farfetched and shaky. The substantial arguments ought to be arranged from greatest to smallest as the far-fetched and shaky ones are put out.

❖ Sharing and allotment of ideas (arguments)

Arguments can therefore to split to each of the team mates equally in the contextual relevance of the dignitary role one is to play in the debate.

❖ Consultation

As a team consult each other noiselessly before you take on the platform; to cross examine and to get cross examined, to present arguments, to respond to the audience Asker. This is synergy!

- Note that consultations while on the platform are not allowed as per the Mock Debate Code, so consultations thereof should be done prior stepping on the platform.
- More to this, consultation and information sharing ought to be in the circle of only teammates and not side mates because it is only one team that wins the debate and not the side. Therefore, it is illogical to liberally grant ideas and arguments to debate speakers of another team though you are of the same side because they may rise intellectually above you and win the debate match instead of you.
- Be selfishly generous to side-mates by only supporting and supplementing their arguments but not consultations and ideas-sharing.

- Nevertheless, for cohesion is what makes a team, in consonant solidarity, teammates and side-mates should not contradict each other, instead they should support and supplement each other with new ideas and examples and so on.

c) Timing (Timeliness)

Timing refers to optimally utilizing the time allocated in the speech, questioning sessions as well as respecting the time bounds thereof. A debate-speaker should speak moderately to put enough time to dealing with his arguments and to finish within the time bounds (allocated time) to do well. Nevertheless, while speaking in the moderate speed, he ought to vary in tempo to avoid monotony.

How then can a debate-speaker be timely; how best can he speak within the time bounds or the allocated time span, and how can he be able to optimally maximize the time allocated in articulation of his arguments, how best can he give appropriate time for each individual issue of the debate in construction, rebuttal, and questioning.

❖ Working within the allowed time bounds

First of all, in the standard octo finals to final matches, there are six minutes for a speech, two minutes for cross examination, 30 seconds for Audience Asking session and seven minutes for break; 30 seconds for extra time and 7 minutes of Break time; this is 10 mins and 35 seconds altogether, for each debate-speaker in a debate match; real ample time. An effective debate speaker observes these wise principles below;

○ Preparation (Research)

As earlier on explained in the preceding chapters, preparation is very significant to a public speaker and in this case very important to the timelines of a debate-speaker. You need to go back and read seriously about preparation in the preceding chapters.

A debate-speaker who has prepared himself through thorough research and has acquired and stored knowledge in his mind does not waste time to first think and then talk, nevertheless he does this simultaneously in his speech and questioning, enabling him to finish within the time bound.

○ Memory training

This is the practice of committing to remembrance the entire speech or part of the speech and significant ideas of the debate that come up to heart and mind. This practice nullifies the delays brought about by fidgeting to first read each idea in the debate and then fidgeting harder to think about the explanation thereof. Nevertheless, ideas committed to heart and mind flow fast enough in speech to be able to finish within the time bounds.

- Walking onto the platform immediately when called upon

This is real time saving: if you know you are the immediate subsequent speaker, while the incumbent speaker is winding up; be on the qui vive to take on your turn, get on your marks, get set so that by the time the moderator calls you upon, you are already on the platform. By doing this you will save time that would be wasted in taking about 45 seconds to get to the podium. More to this, if you are the one going to cross examine immediately, by the time of the Audience Asker, you should already be on your way to the cross-examination zone so that by the time the incumbent speaker finishes to respond to the Audience Asker, you should have started cross examining.

- Observing the Break-time bounds

Immediately after 8 debaters have spoken, of course all debate contestants in a debate match are given a break of 7 Minutes (standard) to relax, refresh, ease themselves, and also consult with their coaches in preparation for the second half of the debate match. The strict rule here is that all debaters in the debate match should be available seated in the debate room and ready to resume the debate, by the time 7 minutes break time elapses. Debaters which arrive late, coaches that keep consulting with their teams by that time, shall be penalized.

- Responding to the questions of the Audience Asker timely

First of all, there is no detriment on the Audience Asker if he doesn't ask well enough for he does not appear on the judgment sheet, nevertheless it is detrimental to the answerer when he fails to answer the question of the Audience Asker vividly; for he appears on the judgment sheet and on that point, he will be weighed down in marks attainment. Therefore, he has to maximize the time allocated for him to respond to the Audience Asker by thinking for the answer during the asking of the question thereof, and not thinking for the answer after the question has been asked. This is quite a hard task that only genius debaters can do to save time to efficiently respond to the question of the Audience Asker before the bell goes; because you may really need ample time to really answer the Audience Asker's question.

- Summarizing within the 30 seconds of extra time

First of all, this applies to the speeches of debate-speakers and not Audience Asking, cross examination, and break time; and first of all, the 30 seconds extra time is the additional time the debater is given to conclude after his time of 6 minutes has expired. It is important to repeat emphatically that a debate-speaker who speaks for over 30 seconds beyond the allocated time blatantly receives lower marks within the strategy base of appraisal. Within 30 seconds of extra time, a debate speaker should be able to finish his or her sentence or idea, because it is not argumentatively conclusive for one to cut oneself at the beginning or at the middle of the concluding sentence or idea, if the extra time has not expired in spite of the fact that the 6 minutes allocated time is up.

When the 6 minutes of speech have expired, the bell will sound to signal that and when the 30 seconds of extra time is up, the bell will sound a little differently to signal that as well. Therefore, a debate speaker who finishes his case substantially within 6 minutes does well, and a debater who finishes his case substantially within 6 minutes and 30 seconds does well also.

❖ **Possessing a watch for self-timing**

The best way to time yourself is by possessing a personal timer which is a watch; properly set. Lacking a watch makes you susceptible to the shocks of time signals by the moderator unawares; nevertheless, possessing one keeps your mind of time in consonance with the signals of time by the moderator(s).

❖ **Mastering effective volubility in speech**

Volubility in this context is the ability to speak fast enough ideas and arguments to be able to finish within the allocated time. Slow speeches apart from being boring, are never timely and too fast speeches besides being adversely difficult to follow by the judges and the audience are unnecessarily more than timely. Be neither slow or too fast nor monotonously fast all through nor moderate all through; for varied voice intonation shall be frustrated into jarring monotony! So what now?! Embrace this golden rule here; be fast in varying the tempo of your speech to be effectively timely.

❖ **Giving an appropriate amount of time to the important issues in the debate.**

How best can a debate-speaker appropriate time to issues in the debate? Which issues require more time, which issues require less time and which ones require no time at all? These are questions, an effective debate speaker should ponder about pertaining this section of timing.

By espousing the principle of first things first, an effective debate speaker shows that he has understood the motion by giving priority to important issues over less important ones, and priority to less important ones over non important ones.

○ **Priority in optimizing fully the time given**

A debate-speaker who ends his speech before his time of 6 minutes expires does bad, and if he ends his speech over 30 seconds below the allocated time escalates from worse to worst in this section of strategy for it is a shoddy case deficient of a lot of ideas. An effective debate-speaker knows that even if his ideas are well explained, as long as there is more time left, he endeavours to explain them better with more examples, facts, analogies name it. The golden rule here is; never end your case before the allocated time is up!

- Priority in construction

An effective debate-speaker focuses his time to important issues; the weighty arguments to construct and which crucial-critical issues to rebut. He does not waste time; he neither brings forth shaky and farfetched arguments in construction neither does he emphatically deal with trivial points in rebuttal. Nevertheless, he brings forth immediate-weighty and strong arguments first, puts the majority time in articulating them before he explains the less important ones in the minority time left. This is what they call effective timely construction!

- Priority in rebuttal

And he identifies the most crucial questions, ideas and points of clash and contention to allot the most time refuting them, and the trivial and less important ones he refutes them later for the least time left.

- Priority in building-on

An effective debate-speaker does not build on any how; he analyzes the arguments of his teammates and side-mates to see which ones are weightily worthy to be built on first, and which ones less of weight follow and finally which ones do not need building on because of the least or no weight at all.

This is what they call effective timely building on and rebuttal.

- Priority in cross examination

This refers to asking questions which are more relevant and matter most first, in checking the sobriety of the case of the opponent speaker. Like a prosecutor determined to pin the suspect to conviction and win the case for the government, a debater questioning should also do the following to win the fight of cross examination

- Ask precise questions

This is all about being point blank; this is all about asking exactly the issue of contention: not wasting time in beating about the bush or rebutting or asking personal and paragraph-like long questions. This saves time for asking more questions.

- Effective interruption of the answerer

Here the effective cross examiner interrupts the answerer if he has already picked what he wanted from his answer to his question to prevent him from unnecessarily prolonging his answer. This is because interrupting a prolonged answer saves time which would be used for asking more questions

d) Understanding the debate system

It is so fundamental that debaters should comprehend the gists of the debate which concern essentially the two aspects;

a) The code of conduct.

This concerns speaking in full capacity by exhibiting full dignified responsibility maturity, authority, intellect, dress-code and mannerisms (mannerisms not so mandatory) of the dignitary a debater is mocking. The debater should relate issues of discussion with the dignitary's professional role, the set-up, the history, the status quo and the future-projected status of the very issues discussed. Debaters should observe formal protocol in greeting, addressing and responding to each other knowing that this is a discussion pertaining honourable ladies and gentlemen. It is important for debaters to portray dignitary reasoning prowess rather than mediocre reasoning because of the weighty responsibility that usually comes with formidable dignity. It is an error for mock debaters to debate in a high school manner but rather they should debate in a Formidable-Summit manner.

Also, do not acknowledge the judges, for when were presidents and dignitaries judged by the judges? Know that this is a debate in actual sense and judges are appraising you but in the acting sense which is desired you are presidents and dignitaries in a Formidable Meeting. Acknowledge the Moderators by their real names-not Mock names for the code provides not for that. Acknowledge them respectfully by their presumed Formidable Media Houses they have acted to belong-the code provides vehemently for this. Do not introduce yourself by your real names. You own the Mock Debate name, during the debate. It is wrong and offside to even say in the debate match; " My name is Akiror Jane, I am debating as the Minister of Health and I am the Opposer and we are in Omatenga Primary School Hall which is presumed Hotel Serena." It's offside. When have you ever seen in a movie John Okafor saying in a movie he is acting saying; 'My name is John Okafor by the way but I am acting as a stubborn Mr. Ibu'?! The character of Mr.Ibu has never done that this will waters because this will be amateurish and water down the strength of his acting picture. The same applies to the Mock debate. NB: But also, do not possess the same Mock debater identity of previous debates, if you have been switched another mock debater identity by the Tournament Debate Organizers. Do not acknowledge the name of the venue by its real name. It violates its Mock identity accorded to it in the set up of a formidable venue like Serena Conference Hall. If the Hall is set up by the debate organizers as Hotel Africana, entreat it and the atmosphere around it as Hoptel Africana and not Kumi Christian Visionary School Main Hall 1. Do not treat the audience as students or anything related to their actuality, most especially the Audience Askers if they have introduced themselves as that, you are acting as being in the AU or UN summit, treat them as respectable citizens, Ugandans, or Africans or countrymen. More to this, address each debater with the dignitary identity assigned to him or her and not by the actual names.

b) The focus of the debate

Here, a debater should have the ability to separate the weighty issues from less-weighty issues in terms of construction and rebuttal of arguments. It is a waste of time to put forth far fetched arguments in construction and to deal with trivial points in rebuttal, if immediate arguments and crucial questions are left out.

It is therefore erroneous and consequently detrimental to abrogate the code of conduct and the focus debate. This clearly will show that the debate-speaker did not understand what the debate is about and will score less in strategy. On the other hand, a debate- speaker who understands exhaustively the central issues of the debate scores better.

CONTENT (WEIGHS 50%)

It means the weight and strength of the arguments that are used in support or in negation of the motion or theme discussed about.

An argument to be effective, ought to engender conviction through reasoning.

More than one side of the subject must be considered before we can claim to have fairly and thoroughly deliberated upon it, and thus content becomes very significant about three distinctive aspects; Construction, Rebuttal, Building on, Questioning (Audience Asker response and Cross examination)

a) Construction

Construction refers to the art of building of an argument or point. Arguments should be coherent, logical, relevant and backed by vivid evidence. Debaters ought to desist from shaky and far fetched arguments while deliberating as the rebuttal of such arguments thereof is made easy by the opposing teams to their teams own detriment.

In coherence, logic, relevance and evidence, debaters should interplay the aspects of analogies, theories, theses, status quo, examples and so on, into their arguments thereof in line with the motion debated over.

Debaters do not really need to present physical evidence but shall only cite out the evidence and its source thereof.

Much more importantly, for an argument to be effective it has to strictly follow a certain order as follows;

Stem:

This is the sign that highlights the gist of the argument.

It right away should identify what the argument is and how it makes a logical connection to the motion. It should be a single sentence encapsulating clearly the precise essence of the argument which the speaker will expound on subsequently with details.

To guarantee that a stem is effective, connect it to the motion using any one of the conjunction words or phrases (because, since, for, so that, in order that and so on) and see if the sentence is still sensible. A debate-speaker is contesting against death sentence for defilers, for-instance. His argument is grounded on the lack of moral authority of the court system to try and judge capital offenders and considers the following three stems:

- a. The court system.
- b. Moral authority of the court system.
- c. Lack of moral authority of the court system to try capital offenders.

All the above stems seem to be correct, but which of them is the most suitable?

By applying the conjoining word 'because' let's test and see how sensible each of them is:

- a. I contest with the death sentence for defilers **because of the court system**.

[Test: This does not make too much sense because it is so hung an argument that it raises more questions that seek more explanation from the hearers.]

- b. I contest with the death sentence for defilers **because of moral authority of the court system**.

[Test: This makes more sense. Nevertheless, it still remains quite vague. It is incompletely expressed and raises questions from the hearers, like: 'What about the moral authority of the court system?']

- c. I contest with the death sentence for defilers **because of lack of moral authority of the court system to try capital offenders**.

[Test: This is rationally the best stem because it encapsulates all the answers to the probable questions from the hearers in a single satisfactory and complete statement. It also clearly cuts out and indicates the main point that the debate-speaker will expound on]

The case of pre-stems

For stylistic purposes of audience caption, a debate-speaker may use pre-stems. Pre-stems pertain the application of axioms, rhetorical questions, idioms, analogies, rhetorical, quotes or figurative phrases to embellish an argument.

Take for an example, an argument emphasizing the weaknesses of the Inspectorate of Government in combatting and eliminating corruption may be pre-stemmed as the "Toothless dog that can't bite" point.

As long as the debate-speakers do not spend so much time on pre-stems, and instantly after the pre-stem bring in the actual stem, this is a perfectly acceptable phenomenon.

For the motion that says: 'Africa should ban culture and tradition for development' an argument in support of the motion would be organized as follows:

How bright really is the darkness of primitivity?! [Pre-stem]

Culture and tradition should be banned so as to bring to an end the consequences of primitivity. [Stem]

Explanation

This is literally expounding the stem through insights that demonstrate its essence and consolidates the argument as a whole. The questions of **why** and **how** of the stem, in regard

to your stand on the motion, when answered properly, is an indication that you have substantially done the explanation.

After mentioning the stem, immediately an effective debate speaker should ask himself the **how** or **why** or both **how** and **why** (depending on which questions apply) the stem is of essence to his stand in the motion.

For example

For a motion that states: 'Uganda should sentence murders to death!', a debate-speaker could give this stem.

Stem:

Murderers should be sentenced to death because the death sentence is a just punishment which operates by threat and earlier warnings.

Question for the debate-speaker to ask himself here is:

How does the death sentence operate by threat and earlier warnings?

Perfect answer here is:

The Penal Code has all crimes with each having a salient prescribed punishment. In this case, the grave offence murder in this context, is clearly indicated for the graver punishment of the death penalty. So, the prior caution and warning of the consequence of murder, justifies the punishment of the death sentence for murderers.

Examples

Examples are evidences used in quantifying and qualifying an argument. Without examples, arguments are merely theories and unverified concepts. Therefore, for a debate-speaker to excel in content, he has to bring in examples which really confirm his claims to the audience.

What kinds of examples then can a debate-speaker bring on?

Authority

An authority is a widely acknowledged figure in a specific field recognized as a standard of judgment and a basis of reference. An authority can be a body (like United Nations, Uganda High Court, Ministry of Education, Federation of International Football Association, International Court of Justice e.t.c), books (like Bible, Rome Statute, Black's Law dictionary, prominent books in different fields), national and international laws and treaties (the penal code, the International Covenant on Economic Social and Cultural

Rights, the Anti-torture Act of Uganda e.t.c), prominent personalities (like Jesus Christ, William Shakespeare, Aristotle, Martin Luther, Mandela e.t.c).

An effective debate-speaker effectively uses authority figures within a related field to support the argument.

For example, to show that freedom from torture is a non-inexcusable right, a debater may cite the Anti-torture Act of Uganda, Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment of United Nations, as a basis for his argument. Nevertheless, opposing debaters may refute such examples on the basis of their lack of credibility and integrity, and thus a debater should either choose carefully the credible authorities the opponents barely can cast doubt or the ones he is able to properly defend.

Popular subject

This is a prominent and famous incident or matter which a debate-speaker can use to support his argument. A debate match that talks about terrorism, the debaters would cite the terrorist organizations of Alshabab, Al-Qaeda, and the cases of the 9/11 bombing in USA, the Kyandondo Rugby grounds bombings in 2010. Arguments with such examples readily convict judges and the general audience since they appear clear, realer and generally cognized by almost everyone in the world.

Analogy

Analogy is a proficiency of referencing another subject with similar traits to support the argument. It is also a technique of using common objects and subjects people see and experience around or easily cognize, to explain better the complex issues of an argument.

For example:

A debate-speaker on explaining the supremacy of the constitution over everyone else could compare it to a lion:

'On the basis that a lion is the king of the jungle is the same basis the constitution is king and the supreme ruler of us all.'

Nevertheless, such examples shouldn't be alone but alongside other examples. Most importantly, they should be used as a last alternative. This is because they can easily be challenged by opponents basing on weak relation and similarity of the two subjects.

Statistics

This is a systematic collection of data on measurements or observations or trends often related to demographic information, and other spheres of life, cited out by a debate-speaker as evidence of his argument. Statistics should be from reputable sources, accurate, precise and easily understood by judges and the audience. Statistics in an argument brings about persuasion, and persuasion is very important, therefore interpreting the given data and shaping that interpretation toward a convincing statement-is fundamental.

Tips on using examples

- Start with primary examples

Primary examples are crucial evidences that back up your argument and so they should be given priority. Secondary examples may be brought in afterwards.

- Have a diversity on examples

To show that your argument is universal, as debate-speakers from the same team, never glue yourselves only to one region or timeframe for examples, during a debate. You ought instead, gather examples of arguments from various sources.

- Repeat not examples

Do not re-use examples that were already used. Unless these examples provide a new shade and light, they should be avoided. This is because it portrays lack of enough research and cause a low mark in content during judgment.

- **Explain examples**

Through explaining, examples become plain and comprehensible by the judges and the general audience. It is not right to just merely list or mention examples and then move on, with the assumption that the judges will obviously cognize what they refer to. By expounding the examples, debaters prove how verily they (examples) work and affirm the argument.

- **Do not use examples as the stem**

Going directly to the example when arguing without having the principal logic point (stem) articulated first, makes the case naked, weak and defenseless. It will give room to the opponent debaters to just tear down the example and the argument is simply defeated. Also, this method has always proven so feasibly unsuccessful to many debaters that it has triggered the argumentative points to be dropped because of the inadequateness of time to bring them substantially forth at the end.

Now therefore summarily, to have a solid and substantive argument, first, you need to bring in the stem, after the stem bring in the explanation, after the explanation bring in the examples.

Here is the equation:

Construction = **Stem** + **Explanation** + **Examples**

b) Rebuttal

This art of portraying the weakness and shakiness of the argumentation of the opposing debaters. Rebuttal is done against the arguments and the refutations/rebuttals made against ones debate team and side. A debater here should strive so hard with all the logical prowess to disqualify the case of their opposing debaters by validly indicating the flaws and loop-holes thereof. This the point where weight and strength of arguments constructed are critically assessed; arguments not vividly-validly refuted and rebutted will stand and count, nevertheless if they are are convincingly proven weak and shaky, they successfully fall off the count.

NB. Argumentation or rebuttal after the expiry of the time allocated for the debate-speech, will be treated as null and void unless it is the last brief bit of finishing the idea or sentence thereof.

It will only truly be defined as merely a speech day if rebuttals in the utterances of debate-speakers are inexistent in a debate match. Imagine a world without friction (Friction the force that opposes motion)-how slipperily pathetic general living would be, much more; imagine a world with only female beings-how childless and numerically waning it would be, much more, imagine a government without an opposition wing- how dictatorial it would be, imagine if there was no one to argue against Dalton's Atomic theory, how falsified academic theses would be. In all these imaginations; the nullity of clash, conflict and argufy ultimately lead to no substantial result. Precisely is the same way, rebuttal applies contextually here as one of the cornerstones of debate.

What expressly really then is this ancient truth of rebuttal that is generally significant? Is it a speaker **saying** that an opponent's argument is not valid or is it a speaker **showing** that an opponent's argument is not valid, or is it both? If a speaker **says** and does not **show** the invalidity of the argument he is against, that is literally a false accusation. Nevertheless, if a debate speaker **says** and **shows** why and how the argument thereof is invalid, he strikes the right note of rebuttal.

Let's get a little deeper into this grand aspect.

Instead of just saying, "It is not true. It is false. Wrong. Wrong" as a rebuttal against the opponent's arguments, a debater-speaker needs to firstly identify the weak spot in the opponent's argument, then attack it. The following are spots to identify weaknesses;

Relevance

This involves the weakness of how the opponent's argument does not relate to the motion at all. By a debate-speaker showing that it does not even support the opponent's position of the motion, this type of rebuttal uncreates the entire argument.

For example:

In a debate on the motion "Africa should embrace culture and tradition for infrastructural development," the proposer delivered an argument citing how culture and tradition has engendered good morals of fidelity, virginity, respect. The opposition merely rebutted that the engendered morals of fidelity, virginity, respect have never in any way built schools, roads, airports or any form of infrastructure.

Impact

This kind of rebuttal regards debaters attacking the presumed impact of the subject's assumed attribute.

For example:

In a debate motion "Africa should fortify foreign relations," the opposition debate-speaker cites out that the foreign aid attribute of foreign relations. He argues that it (foreign aid) has compromised the sovereignty of African states. However, the Opposition speaker can rebut this by saying that foreign aid has actually improved the lives of African people through tackling pandemics, eliminating poverty, reducing the impact of climate change and making progress towards the United Nations' Sustainable Goals.

Assumption

With this rebuttal, debaters attack a peculiar way in which their opponents had described an assumed trait of the subject.

For example:

For the motion: "Uganda should abolish the death penalty", the proposition argues that the death penalty undermines the country's motto: "FOR GOD AND MY COUNTRY". A motto, he adds, has a God of peace, grace and unlimited mercy, of even capital offenders. However, the opposition can rebut by counter-arguing that the reason why God has prepared a lake of fire for sinners that include capital offenders, is because he is a just judge that hates sin, and thus by supporting the death penalty, he is upholding the country's motto: FOR GOD AND MY COUNTRY and not undermining it.

Shaky Arguments

These depend on one another to stand, and a debate-speaker can extinguish two of them with a single attack.

For example:

For the motion, "Africa should ban public gatherings," the proposition debater first argues that public gatherings spread COVID-19. Subsequently, the proposition-debater reasons that it is a legal right that the masses be guarded from such dangerous diseases. The opposition-debater could rebut that there is no COVID-19 nowadays and that masses are fully immune to all COVID-19 related illnesses. the point about the legal right to guard masses from such dangerous diseases has no impact, as it is a hung and shaky argument, with this argument extinguished.

Logical nexus

An effective debate-speaker attacks the lack of logical connection between the assumed attributes of the subject and its presumed impact, in this kind of rebuttal.

For example:

for the motion, "Africa should ban skin bleaching," the Proposing debate-speaker could argue that continuous skin bleaching causes cancer and that the entire Africa is menaced. Here, the opposing-debater can rebut the lack of a connection between the continuous skin bleaching causing cancer and having a public health threat involving the entire African continent.

Examples

Sniping out the example first, is typically a good but not the best tactic. This is because it makes it possible for the opponent-debaters to merely cite another example and the argument will keep on standing. A debate-speaker ought to firstly attack the logic of an argument before moving on to attack the examples.

Nevertheless, the only time a debater-speaker should attack the example first is when the opponent-debater uses the example as the lonesome basis for the argument.

Rebutting Rebuttal

Without having to come back to them, debater-speakers prefer to have their arguments delivered. Nevertheless, once these arguments have been rebutted, it may be necessary to defend them and in essence, rebut the rebuttals.

For example;

In a debate match, with the motion:

'Africa should abolish cultural institutions', the proposition rebutted that it is cultural institutions which are the main movers of tribalism--and not the state.

This is how the opposition rebutted the rebuttal of the proposition:

Tribalism is no way a move of cultural institutions. Rather it is an error of the so-called modern state which has victoriously failed to recognize and acknowledge the blessed reality of our rich cultural diversity; by this I mean it has failed to develop necessary institutions, policies and mechanisms for accommodating the various tribe interests and identities. This failure has mooted the acquisition of enough public space for the expression, affirmation and equality of all tribes thus leading to tribalism and his brothers. Therefore, this is a State-problem—not cultural institutions' problem.

Nevertheless, a debater-speaker should take caution while doing this. They ought to prioritize rebutting the opponent's arguments first before rebutting the rebuttal against him.

Tips on rebuttal

Prioritize rebutting crucial arguments first.

It is important to identify the most crucial questions, ideas and points of clash and contention to allot the most time rebutting them. Refute the trivial and less important ones later during the less time left.

Don't use phrase refutations

It is not substantive to use only a single line or two to make a contrary contention on an argument. This is because it will not do a full onslaught of an argument in such away that it will leave some crucial ideas of the argument not stricken down. Therefore, it cannot be emphasized more that debaters ought to devote enough time to vividly show how and why an argument stands not.

Effectively use rhetorical questions

When using a rhetorical question for rebuttal, give an answer to it in the end. Otherwise, the audience (spectators, judges, debate opponents) are left to answer the question for you; sometimes in disagreement. For example, if a debater only asks "but how really can killing people be justified?" and leave it at that, the judges may well end up thinking of several ways it could be justified. In addition, it simply offers a stepping stone to the opponents to respond to the question later and show how killing people can be justified.

Rebut severally

In order to successfully bring down an argument, it should be rebutted severally, and not only once. Debaters ought to attack an argument (especially a more contentious one) from different angles. And while doing this, they ought to avoid repeating the rebuttals that have already been delivered by their teammates as this will consume time whilst actually adding nothing of value to content.

Press to the acme

This is the skill of pushing one's rebuttal to the maximum degree of disagreement against the opponents' case. A debate-speaker should deal away completely with grey areas and middle grounds of the subject of debate. As far as he can, he should rebut an argument by taking an extreme opposite stance. Everything that falls against a debater's position in the debate should be refuted fully and optimally with no concessions and compromises. This gives way for the greatest level of clash and the uttermost point of contrast between the two sides of debate. And much more importantly, it shields away concessions that may in the end, turn out to be used against the debate-speaker.

For example:

For the motion "Uganda should ban street vendors,";

the Proposition debater can argue that street vendors evade registration and taxation costs thus contributing to a deficit in national revenue.

The Opposition can make an **unnecessarily considerate rebuttal** by saying that street vendors evade registration and taxation costs only little bit and thus are not the only factors to a deficit in national revenue. However, it will be best if the Opposition-debater

can make an ***extreme-onslaught*** rebuttal by saying that street vendors never evade registration and taxation costs at all since tax and registry fee collectors, are readily available in the streets to collect such fees that contribute positively to national revenue.

c) Building on:

This is supporting the arguments of your teammates and side-mates with new examples and insights.

d) Questioning (Audience Asker response and Cross examination)

This entails the wisdom in asking and responding to questions

3. STYLE (WEIGHS 20%)

This is the quality of the oratory and presentation skills of a debate speaker. It entails;

a) Confidence

This is state of having trust in one's self in the physical appearance, ability and personal judgment of the matter(s) deliberated upon, during public utterance.

In public speech and general life's circumstances, confidence is composed mainly of the two ingredients of **eye contact** and **poise/ composture**. Eye contact is the trait of being able to effectively look at the audience eye to eye whereas poise is ruling and conquering emotions of fear, excitement, anger, self-consciousness that can be felt physiologically and seen physically; all during public speech in this context.

b) Posture

Posture is quality of being effectively erect and upright as standing physically during public utterance. In this context, posture extends to being positioned to one spot (the podium's position) on the platform during public speech. The bad habits that tarnish effective posture such as **leaning on the podium, cross-legging, pacing to and fro and back and forth, pocketing, biting finger nails, having hands; held back, at akimbo, folded at the front, scratching parts of the body** distract the audience listeners from attention and thus should be dealt away with.

c) Pause

This is the nature of effectively stopping momentarily for one or two seconds or more, before or after a certain word or phrase during public speech. Effective pauses, among other benefits, enable the message intended in the speech, to sink deep into the minds and hearts of the hearers because of the emphatic effect. Therefore, it is expedient for all public speakers to embrace pauses in their speeches, to be effective.

d) Diction

Diction can be defined differently in two ways; the correct and right pronunciation of words, and the right choice of words; all during public utterance.

Concerning the first definition which talks about the correct and right pronunciation of words; a public speaker inexcusably, should to drill himself thoroughly in this, before standing in any platform. Mispronunciation of words like **said, honourable, against, around parliament, death, thing, process** and so on, is a consequence of seldom use of the dictionary, a lackadiasical utilization of vocal organs by a public speaker, among others.

The right choice of words of diction, concerns knowing the befitting category of words to say in respect of specific occasions, audience, timing and urgency. Some words will sound so offensive, blunt, vulgar, irritable, insensitive, irrelevant, frail, jarring if mentioned in certain dispensations of audiences, occasions and timings. Therefore a public should first read the atmosphere as a guide to carefully craft the befitting words for his speech, to be relevant and effective.

e) Gestures

This is the effective movement of face muscles, limbs and the general body during public

speech. Gestures should not be mild neither should they be exaggerated but should come out naturally depending on how one feels about an issue in the subject s/he is discussing.

f) Grammar and fluency

Grammar is the effective use of language (English language in this context) purely and strictly within its laws and principles. Speaking in broken English by a public speaker is ineffective and will cause a communication loophole between the public speaker and the hearers. More to this, inserting slang and tribe-language words such as banange, kale, mposi, boreta, nini, mbu, shule and so on adulterates the formal English language from its purity, thus being detrimental to the quality of the speaker and the speech to the hearers.

Consequently from being temperate in all the laws and principles of grammar, fluency which is the quality of effortlessly speaking excellently and articulately with mastery by a public speaker, is begotten.

g) Figurative language

This is the effective use of literary techniques and vocabulary for improving and modifying the speech of a public speaker. A public speaker who effectively utilizes the riches of the literary and vocabulary kingdom, shunning the usual and common-place word and sentence renderings, strikes the right note of not only audience caption, but also the revelation of myriad vaster and deeper insights of the subject discussed, to the audience.

h) Audibility

This is literally the loudness of a public-speaker during speech.

A public speaker who speaks in very low tones all through strains the ears of the hearers to his own detriment of the audience not being able to understand and appreciate his speech thereof. Therefore, a public-speaker should be loud enough to heard.

Nevertheless, it becomes a nuisance if the public speaker's loudness is too much in the ears of the hearers. It is therefore advisable for one to measure the size of his audience, so as to gauge the suitable volume to apply; the bigger the audience-the bigger the volume, the smaller the audience-the small the volume—this is what is called **appropriate volume** in audibility!

i) Humour

This is the ability of a public speaker to fill the audience; verbally or non-verbally or both, with joy and laughter during speech. Joy and laughter is triggered by the nature of words and the mannerisms chosen and portrayed by a public speaker during speech.

Nevertheless, a public-speaker shall transform only into a comedian, if his speech is scanty of relevance and content yet filled almost entirely with all the fullness of humour. Therefore, for humour to be effective, it should be relevant to the subject discussed.

j) Smartness

Smartness, which is the elegance by merit of being fashionable in apparel, also stretches further to the general personal hygiene of a public speaker.

Formal occasions like debates require an outfit; from the crown of the head to the soles of the feet, befitting of one who carries authority and responsibility. Shabby, unironed, torn, overmended, worn-out, too skimpy, too casual, too baggy, too tight outfits when worn by a public speaker, cast a negative impression to the audience and rob him of his authority, responsibility and the general audience captivation during public speech.

Personal hygiene is about a thoroughly bathed body, groomed pubic hair, head hair, beards, nails. It is also about brushed teeth and tongue coupled with a neat-polished unsoiled face and so on. It is difficult to reconcile a shabby, smelly and discordant outlook even with the sense that comes out of a public speaker. Therefore a public speaker should firstly excel in smartness ahead of his utterance because it casts first impression, and the first impression of smartness which even augments to one's confidence, matters a lot.

k) Variance (Varied voice intonation)

This is the effective rise and fall of voice in **pitch**, **tempo (pace)** and **strength** during speech.

Pitch is the highness or lowness of voice, **tempo (pace)** is the slowness or fastness of voice, and **strength** is the weakness or strongness of voice; of a public speaker during speech. It is amateurish and boring to the ear to speak in monotones all through, therefore a public speaker has to become natural and rise high or low or moderate or somewhere in between, in the ingredients of pitch, tempo and strength; on some words, phrases, and sentences in the speech he feels require the need.

UNDERSTANDING THE CONCLUDING PROPOSAL

(Cuts across content and strategy in judgment)

It is a concluding proposal and therefore it is what concludes one's case. Now therefore, what really is a proposal, which ought to be presented by every debate-speaker and that ought to be unique and distinctive?

A proposal is a recommended workable plan a debate-speaker provides as a solution to the biggest problem he identifies in the issues deliberated upon during the debate.

In the mire of the debate, there can be many problems that need redress, but here, a debater ought to identify the one he thinks is the biggest to tackle.

A proposal, in strict order, should possess the following features:

a) The solution line

This is the very first single sentence indicating the solution to the biggest problem identified by the debate-speaker.

The solution line ought to be precisely enclosing the solution to fall within a single sentence. More to this, it should clearly label, from its very start what the speaker will expound on.

Much more to this, the solution line should be uttered in the manner of personal possession which is of an authoritative tone. Therefore it should begin with the word **I**, the possessive pronoun, which also signifies authority.

For example, a negating debate-speaker mocking the Minister of Trade and Industry who is Hon. Amelia Kyambadde, after identifying bleaching as the biggest problem that comes with the motion; 'African Union member states should liberalize the cosmetology market' does well when she authoritatively gives the solution line;

I propose heavy taxation on all bleaching products!

Or she can stylistically say;

I, the Minister of Trade and Industry, proposes heavy taxation on all bleaching products!

Or she can much stylistically say;

I cannot but propose heavy taxation of all bleaching products!

All the above solution lines, because of the pronoun **I**, carry personal possession and authority of the debate-speaker, which is effective.

Nevertheless, if the debate-speaker for her solution line says; My proposal is that heavy taxation of all bleaching products should be done, the strength of authority is diluted to look like just a request which is not authoritatively effective of a debate-speaker.

b) The implementer

The implementer is the personality or office or department having the capacity and authority to enforce the proposal (solution line) effectively to its successful end.

For example, the debate-speaker, having explored all the possible implementers to her solution line of heavy taxation of bleaching products, wisely chooses the most relevant, of a wide operational scope and effective and says;

The implementer of this proposal is all the Common Markets of Africa; SADC, COMESA, EAC e.t.c

c) The confines

This is the scope of the implementation of the proposal. In other words, the confines here concern the geographical or social domains or both that the debater thinks the implementer should focus to effectively achieve the proposal.

For example, because cosmetics are mostly used by the females and in almost all Africa, the females are fond of buying cosmetics, she wisely says;

The confines of this proposal is all females all over the African countries.

d) The time frame

This is the period of time in which the implementation of the proposal within the confines intended, a debate-speaker thinks, can be optimally and fully achieved.

For example, because it will take some adequate time to process this proposal into a policy or law, a debate-speaker wisely says;

This proposal will be achieved within 3 years.

e) The explanation and benefits of the proposal

This is the way a debate-speaker substantially shows how the solution line fits the implementer, how the implementer fits the confines and how the confines will fit the time frame and how the time frame will ultimately fit the grand achievement of the proposal.

And after the grand achievement, a debate speaker therefore brings in the few developmental benefits of the proposal.

For example, she wisely expounds and says;

i) Explanation

The heavy taxation on bleaching products with the implementation by the African common markets of really a wide operational scope, confining all women of all Africa because of their proven high cosmetic- consumer behaviour, will properly work well. And, really in three years time, the law and policy making processes for this proposal would have already been achieved as the high taxes causing the bleaching products to be too expensive to be

afforded will bend the consumers to the course of doing without them, and opting for other cheaper non-bleaching products.

ii) Benefits

And in the end, bleaching products shall cease from markets as peoples dermatology health is restored and preserved, while natural cultural norms are upheld for the betterment of our nations.

NB. Everything in the proposal is refutable by the opposing debater

We use proposals in our daily walk of life yet some of us even do not realize that we do. Let's get a little so practical with an example here below, to fully be able to understand the Proposal;

Omiot lives in a country home of Kotiokot Village. After three months vacation in the City with his family, he returns to his home immediately and identifies the biggest problem among other problems; his home is so bushy!

This is what he says:

I propose to clear my home compound! (Solution line)

But this compound is too big, I cannot be able to do it alone with my young children and wife, therefore, I am going to hire the labour of Prisoners (Implementer)

But this will be too expensive for me to pay them to clear the whole of this compound, I will tell them to clear only from where the main home is built up to where the kraal is. (Confines)

I see that the Prisoners labour is adequate, the labourers are many and the warder is a strict supervisor. I know in three hours time (Time frame) will be finally cleared.

Now that my compound is clear, I will benefit a lot (Benefits):

- My children will get ample space for playing
- I will now get enough space for parking my car
- I will get rid of mosquitoes that spread malaria and poisonous snakes whose bites lead to death.

Now, we know that after studying the above example of Mr.Omiot, we realize that we humans often make proposals unknowingly in our daily walk of life when we identify the biggest problems among other problems around us. Now in the same manner should a debate-speaker identify the biggest problem among other problems that spout from the motion during the debate and give redress in the pattern of solution line,

implementer, confines, time frame, explanation and benefits formally, as per the Mock Debate Code manner.

AWARDING OF MARKS

Each of the three bases of adjudication is allocated a specific number of the optimum marks attainable by a debate-speaker as shown below;

1. Strategy- 30 Percent
2. Content- 50 Percent
3. Style- 20 Percent

Optimum Total Mark- 100 percent

Marks are awarded by Judges in percentages per debater.

The optimum mark to be awarded is 100 percent and the least mark is 15 percent. Marks in decimal points for example 65.5 or 77.2 may also be awarded especially in certain instances. Where debater-speakers have drawn and the adjudicator is now basing on the negligible meritorious advantage of some debate-speakers over others, decimal numbers become the significant rank separator.

The marks of debaters of a debate team are added up to get the total. Each judge will rank the team with the highest total as the 1st (1), the team with the second highest total as 2nd (2), the team with the third highest total as 3rd (3) and the team with the lowest total as 4th (4).

In arrival to the winner of the debate, a panel of an odd number of judges of 3 to 9 appraise a debate match. Each judge is to judge every debate-speaker of every team and rate independently, the four teams in the rank of the 1 (1st) to 4 (4th). The ranking by each judge of the four teams is compiled and tallied and the team with the smallest total Rank [Aggregate], wins the debate.

For example, if the debate match was judged by three judges, and each one of them has independently graded the teams in the ranking of the 1(1st) to 4 (4th) as shown below:

TEAM	JUDGE 1		JUDGE 2		JUDGE 3		TOTAL		POSITION
	TOTAL MARKS	RANKING	TOTAL MARKS	RANKING	TOTAL MARKS	RANKING	AV. MARK	RANKING (AGGREGATE)	
ALPHA	298	2	260	3	264	3	274	8	3 RD
MIU	230	4	370	2	280	2	293.33	8	2 ND
BETA	260	3	240	4	150	4	216	11	4 TH
OMEGA	300	1	375	1	384	1	353	3	1 ST

As shown in the tally table above, Team Omega (Opposers II) are the 1st and are the winners of the debate since they have the smallest aggregate and the highest average mark.

Team Miu(Proposer II) and Team Alpha (Proposer I) have the same second smallest aggregate.

But Team Miu emerges as the 2nd because of have a higher average Mark than Team Alpha.

Team Alpha obviously becomes the 3rd.

Team Beta(Opposer I) emerges the 4th because of having the highest aggregate and the lowest Average Mark.

NOTE:

- A. Note that it is the Aggregate that is considered first, in positioning before the Average Mark. In certain cases, one team can be having a higher Total Average Mark but with a bigger Aggregate- here, judges should give Aggregate precedence.

- B. In case there is a draw of teams in Aggregate, the variations in the Total Average Mark is used for positioning them.
- C. And in rare cases, if there is a draw of teams in both Aggregate and Total Average Mark, the Chief Judge with the assistance of the judges, decides the positioning by flashing back on how the debate really went. An odd number of judges will vote.
- D. The adjudicators shall strictly consider and observe the Adjudication Yardstick when appraising the debates

DRAFT
